

Release Note of Mimaki Engineering's USB2.0 Driver (for the WindowsVista)

July 25, 2007

Starting from Ver.1.10, the USB2.0 driver has been upgraded to comply with the WindowsVista. When using the driver upgraded for the WindowsVista, you are kindly asked to note the following points because the upgraded driver is different from the driver for Windows XP/2000, as explained below.

-Modified point from ver1.00 to ver1.10

1.The new version is complies with the WindowsVista.

-Differences of movement from the driver for WindowsXP/2000.

Sleep or Hibernation

Windows XP/2000

When the driver is open, shifting to Stand-by or Hibernation is not available.

Windows Vista

Even when the driver is open, shifting to Sleep or Hibernation is available. (The output is stopped.

When the system returned from Sleep or Hibernation, the output is continued.)

Countermeasures

When a continuous output operation is made for a long time, set your PC not to turn automatically to Sleep or Hibernation.

Perform the setting from Power Options in Control Panel.
